

Experimental Designation: PSC

**raZor** Strong Creeping Red Fescue is an excellent shade tolerant, fine textured turf with a dark green color. It is a superior choice for home lawns, parks, landscape areas, athletic fields, and golf courses, **raZor** flourishes as a permanent turf in areas where cool season grasses are adapted.

### **Advantages of raZor:**

- **raZor** has a finer turf quality than Flyer
- **raZor** has increased stress and heat tolerance
- **raZor** has an excellent tolerance to heavily shaded areas
- **raZor** creates excellent permanent turf that thrives in shady, cool, damp areas
- **raZor** can be used alone or as part of a mixture

### **Seeding Rates:**

- Used alone, **raZor** requires a seeding rate of 5 lbs. per 1,000 square feet.
- When used as part of a blend, the required rate is 3 lbs. per 1,000 square feet.
- Germination begins in approximately 9 to 14 days.

### **Cutting Height:**

Recommendations vary according to location and season.

- Under ideal conditions, the first mowing should be required in 25-30 days. Cooler or hotter weather will require a longer period of time for the first mowing.
- Limited use is recommended for the first 30 days after seeding.

### **Fertilization:**

**raZor** responds to 1 lb. Nitrogen per 1000 sq. ft. per growing month.

- Repeat applications only as grass shows need by fading color.
- Apply from 4 up to 6 lbs. N per 1000 sq. ft. maximum per year.

This variety was bred and developed at Rutgers University in New Brunswick, NJ.
